

eMazzanti Offers Microsoft Azure Cloud Services for Business with West Coast Support

eMazzanti Technologies' cloud services, IaaS and DRaaS offerings delivered on the Microsoft Cloud with local support enhance business opportunities for West Coast customers

Bellevue, Washington -- (Cision) November 8, 2016 — eMazzanti Technologies, a Hoboken, NJ-based IT consultant and MSP, today announced a comprehensive mix of cloud services for business delivered on the Microsoft Cloud (Azure) and support, available through its Bellevue, Washington office.

eMazzanti's cloud solution offerings, including cloud readiness assessments and on premise to cloud migrations; line of business system and web application hosting; infrastructure as a service (IaaS); cloud business continuity solutions; Internet of Things (IoT); and cloud media services; all with local support, are designed to enable low cost rapid deployment and scalability to support significant business growth initiatives.

The breadth of eMazzanti's cloud services and depth of cloud expertise provide an attractive resource for organizations seeking to cost-effectively locate functionality in the cloud.

"Hardware is now software," stated Mark Clawson, Cloud Services Practice Manager, eMazzanti Technologies, Bellevue. "By leveraging our experience working with the Azure Cloud Platform we can provision infrastructure in hours to days instead of weeks to months.

"Moreover, with Microsoft Azure we can leverage data grid computing concepts, from the early 2000s, to distribute customer solutions across the approximately 30 networked Azure Data regions across the globe.

"The increased performance, reduced capital investment and scalability of our cloud offerings remove several barriers to rapid expansion for any size business."

eMazzanti's cloud business continuity solutions include disaster recovery as a service (DRaaS) and on premise to cloud system backups, while the Internet of Things (IoT) offering leverages data stream analytics, machine learning, and the Azure IoT Hub (part of the Azure IoT Suite). Lastly, its cloud media services incorporate media management, streaming, encoding, and analytics.

Advantages of Cloud Services for Business

Remote access, scalability, pay as you go pricing, and the ability to offer new and expanded products and services characterize eMazzanti's cloud services for business. One key advantage is the ability to scale down when computing resource needs drop, a feature that many on site bare metal server, or data center hosted servers, cannot readily provide.

"Companies understand that they need well-managed, secure, and up-to-date IT to stay competitive," stated Clawson. "eMazzanti's scalable, elastic, and secure managed IT services and cloud solutions free up our customers' key personnel to focus on revenue generating initiatives."

Microsoft Neighbor

The availability of eMazzanti's cloud offerings expand its local markets to the West Coast, making on-site consulting, implementation and local support convenient, practical and affordable. Located in Bellevue, 30 minutes east of downtown Seattle, Washington, the company's facility is a short distance from Microsoft Redmond Global headquarters and Bellevue US headquarters, affording the opportunity for close collaboration with Microsoft personnel.

Accordingly, eMazzanti is one of the first organizations to participate in Microsoft's Azure Mentor Program (AMP). Participation in the exclusive AMP enables eMazzanti to provide advanced cloud services presale and technical support, access to Microsoft decision makers and relationships with key Microsoft Azure support personnel. eMazzanti leveraged AMP and Microsoft Azure training to assist with attaining the Azure Platform Silver Competency in 2015 and Gold Platform Competency in the summer of 2016.

Strategic Alliances

As part of its West Coast expansion, eMazzanti also provides cloud hosting and managed cloud services through key strategic alliances in support of Microsoft Partners' West Coast customers. Business decision makers can be confident in eMazzanti's secure, high-performance cloud services built on the Microsoft Azure platform.
